Work pass: S Pass-eligible (criteria met per Singapore Polytechnic Assessment)

SUMMARY

Computer Engineering graduate with hands-on experience spanning RPA automation (UiPath, Excel VBA, Python), full-stack web development (React, Node.js), and embedded systems. Built a production audit-automation platform and five independent full-stack, ML, and IoT projects. Looking to bring versatile, production-ready engineering skills to a fast-moving tech team.

WORK EXPERIENCE

RPA Intern – KLP LLP

March 2025 – Sep 2025

Web-based Audit Automation System

- Engineered a full-stack audit automation platform using **React.js, Python, SQL and Docker** to extend the RPA workflows with a web-based UI and AI integration.
- Automated repetitive manual audit workflows using **UiPath and Excel VBA**, cutting processing time by 40%/hours saved and eliminating recurring manual data entry.
- Architected **RESTful backend APIs in Python** to automate audit data flows, significantly cutting down manual data entry for auditors and management teams.
- Optimised **relational SQL database** models for complex multi-entity audit data, ensuring high data integrity and long-term query performance.

EDUCATION

Diploma in Computer Engineering

March 2023 – May 2026

Singapore Polytechnic

- Specialized in Computer Application

TECHNICAL SKILLS

- Proficient:** Java (Android), Python, C++, JavaScript, React.js, SQL (MySQL/ PostgreSQL), Node.js
- Tools:** Docker, Linux, GitHub, AWS, Firebase, Figma, Roboflow, UiPath, Excel VBA, RESTful APIs, PowerBI, Microcontrollers (Arduino/ ESP32)

TECHNICAL PROJECTS:

Real-time Facial Recognition Access System

- Integrated the **Pi Camera with Raspberry Pi**, configuring command-line setup on the Pi to stream live H.264 compressed video via **RTSP over a 5G network**.
- Optimized processing by performing facial recognition at the **Multi-access Edge Computing (MEC)** layer, achieving ultra-low latency compared to traditional cloud processing.
- Demonstrated the benefits of 5G for AIoT, including 10x faster data speeds and the ability to support high device density in smart infrastructure.

EV Carousel [Rotating Parking Space with Integrated EV Charging]

- Deployed microcontrollers, utilization sensors, IR sensors, and LCD interfaces to enable real-time parking management, efficient space utilization, and user-friendly interactions in compact urban areas.
- Developed an EV-friendly vertical carousel parking system to optimize urban space, integrate seamless EV charging, and align with Singapore's Green Plan 2030 for sustainable transportation (SDG 7, 11).

UniCycle [Web & Mobile Application for Recycling Knowledge & Academic Materials]

- Built the web platform (**HTML, CSS, JavaScript**), including the landing page, home page, payment flow, and shopping features.
- Built backend infrastructure using **Firebase, Python, and SQL** to support both the app and web platforms.
- Designed **Figma UI** mockups for the mobile app and guided teammates on interface improvements.
- App built with **Java, RESTful APIs, Gradle, and responsive XML** layouts, featuring QR code scanning and payment integration.

ML-based Food Image Classification System

- Engineered a custom **CNN image classification** pipeline using **Keras/TensorFlow** to classify multi-class food items and unknown baselines with 92.8% test accuracy.
- Architected a ~1.24M parameter deep learning model using **Keras Functional API**, incorporating **Batch Normalization, double Conv layers, and Global Average Pooling** to balance model capacity and generalisation.
- Evaluated pre-trained architectures (**ResNet50, MobileNetV2, InceptionV3**) against custom CNN models and deployed an interactive web app featuring live camera feed inference.

SP-Bot [Embedded Assistive Robot for Senior Care]

- Developed **C++ embedded control logic for Arduino-based robots** to support seniors with medication adherence.
- Integrated **ultrasonic sensors, IR sensors, and LCD** interfaces to manage real-time parking and space utilization.
- Designed and built an **Arduino-based assistive robot** to support seniors by reducing loneliness and improving medication adherence.

SOFT SKILLS

- | | |
|----------------------------------|------------------------------|
| • Adaptability & Problem-Solving | • Professional Communication |
| • Attention to detail | • Team Collaboration |
| • Fast Learner | • Systemic Debugging |

CERTIFICATIONS & AWARDS

- Docker Foundations Professional Certificate – LinkedIn x Docker
- Exploring a Career in User Experience Design – LinkedIn Awards & Recognition
- Google AI Essentials Specialization – Google
- First Prize in SP Robotics Innovation & Technology Enterprise Championship
